47: AL 3.3

Some corrections for "Properties of Formal Grammars with Mixed Types of Rules and their linguistic relevance", A.K.Joshi.

- p.7: In Def 2.5.1, m is the length of σ' .
- p.9, line 11 bottom: of LALN's should be of nr -LAL's.
- p.11, line 17: a_j should be a_i .
- p.14, line 1: a rule should be rule.
- p.14, line 5: some occurrence should be any occurrence.
- p.16: G_1 and G_2 should be as follows: $G_1 = \langle \Sigma, \mathcal{T} \rangle$, $\Sigma_c = \{abc, abpqC\}$, and $\mathcal{T} = \{u_1 = (abpqC, (ab)(C)), u_2 = (abC, (a)(b)(C)), u_3 = (acC, (a)(C)), u_4 = (acC, (a)(C))\}$.
- $\mathcal{T} = \{u_1 = (acC, (a)(C)), u_2 = (acC, (a)(C)), u_3 = (acC, (a)(C)), u_4 = (acC, (a)(C))\}$.
- p.16, line 10: DAG should be DAGN.
- p.16, line 17: after the only nonterminal add (excluding null symbols; we conjecture however that these can be eliminated, i.e., in Theorem 3.3.1 we can replace DAGN by DAG).
- p.18, line 11: in terms should be in terms of.
- p.18: In Def 3.4.2, the same subscript i has been used in d_i and q_i . There is no significance to this --- bad notation.
- p.19, line 15: have to should be have to be.
- p.21, line 19 bottom: replacer(s) string should be replacer string(s).
- p.22, line 6 bottom: q_1 should be q_1 .
- p.24, line 17 bottom: terms should be terms of.
- p.24, line 10 bottom: before : add (of course, these are not the only conditions).
- p.27, line 4 bottom: after . add A replacement rule can also be generalized by allowing all occurrences of S in a complex host to be simultaneously replaced by the same replacer string. Let M_{gAG} 's and M_{gAL} 's be the corresponding grammars and languages.
- p.27, line 4 bottom: M_{AL} should be M_{gAL} .
- p.27, line 2 bottom: M_{gAG} 's should be M_{gAC} 's.

ADDENDA ET CORRIGENDA to Preprint No. 33

'Automatic Recognition of Speech Sounds...' by A. Iivonen

Corrections

Addenda

Page 6, Paragraph 5, Line 23:

The amount of correct identification by means of the program described was:

<u>Phoneme</u>	<u>Number of variants</u>	<u>Correct %</u>
n	50	76
m	37	67

By means of a modification of this program the recognition result was:

<u>Phoneme</u>	<u>Correct %</u>
n	90
m	70
