Greetings from the New Editors-in-Chief

As the incoming Editors-in-Chief, we welcome you to this issue as we embark on the editorship of ACM's *Transactions on Accessible Computing (TACCESS)*. We thank Matt Huenerfauth and Kathleen McCoy, who have served for the past 6 years. Their leadership and vision for *TACCESS* is represented in the consistent high-quality journal that we have read these past years. We look forward to continuing their superlative work and contributing to the journal's growth in the coming years.

We would also like to thank the associate editors and members of the Editorial Board for their service to *TACCESS*. Particularly, we would like to thank outgoing associate editors Armando Barreto, Faustina Hwang, and Shari Trewin, who have made a Herculean effort to manage the increasing set of papers submitted to *TACCESS*. In this phase of renewal, we welcome new associate editors (Enrico Pontelli, Jinjuan Feng, Kathleen McCoy, and Matt Huenerfauth) and members of the Editorial Board, whose efforts you will see represented in upcoming issues of *TACCESS*.

TACCESS remains the premier journal for research that addresses challenges and issues in the design and use of technology for individuals with diverse abilities. Papers present innovative research that is of interest to the accessibility community. The community itself consists of practitioners, researchers, educators, and rehabilitation professionals. As such, papers that relate to specific application domains or survey/literature review papers are also of interest to *TACCESS*.

In the tradition of presenting innovative, high-quality work, this issue contains five articles: "Designing and Evaluating a Customizable Head-Mounted Vision Enhancement System for People with Low Vision," "Accessibility Information Needs in the Enterprise," and three extended versions of papers presented at *ASSETS '18*, which are introduced by guest editor Karyn Moffatt.

As we look ahead to future issues, we encourage the submission of special issue proposals. Submissions are welcome throughout the year, and the proposals can reflect the diversity of topics that *TACCESS* covers. Past special issues have brought together papers with contemporary topics that are relevant to many *TACCESS* readers. We look forward to seeing new proposals and will continue to connect with related research communities with the goals of organizing high-quality special issues of the journal and expanding our readership. More information can be found on the *TACCESS* website, which is being migrated to ACM's new web platform in the near future.

By stepping up our online presence, particularly on social media and connecting with readers and authors at a broader set of events, we anticipate broadening the visibility and impact of *TACCESS* and increase synergy between related communities. More details will come soon.
